To Whom it may concern

Reference: Statement Regarding AMIGUARD Ballistic Panel Warranty

Our standard 10-year AMIGUARD® product warranty applies to the AMIGUARD® Ballistic Panels if UV protection coating has been applied. If the product is left out in the elements with no protection against UV rays, this would void the warranty. There is no shelf-life to the product.

The only outside elements that can deteriorate the product over time are direct UV rays which can begin to deteriorate the resin properties over extended periods of time. Other outside elements such as heat, rain, snow do not negatively impact the product however it is always recommended to protect the panels from the elements for best performance and longest lasting life. The best method of protecting against the elements is an UV inhibitor paint.

Please contact me in case of further questions.

Respectfully,

A handwritten signature in blue ink, appearing to read "Markus Erbdinger", with a stylized flourish at the end.
